I came back from the project in Paranesti a couple of days ago. It was a very nice and useful experience. We participated in some workshops regarding the reuse of waste and circular farming. We integrated with the locals, saw the life in greek villages and we were shown some amazing landscapes. I tried traditional greek food. I learnt a lot about bees, about the process of making honey. We experienced making natural cream from and natural drinks. I enjoyed my time in Paranesti!

My initial feelings were mixed, I didn't know anyone, and there was some uncertainty. When I got there and the project started with dinner where I could meet the participants, my thinking changed 180 degrees. Participants of quite different ages turned out to be very interesting and nice people, we could exchange our observations and experiences, all while enjoying delicious Greek food. During the project, I learned a lot of information about bee breeding and the production of bee products, as well as the possibility of using what is waste in one industry, but it turns out that for others it may be an essential raw material. Today I am very happy that I was on this project.

The European Circular Farmers Network workshop in Panaresti, Greece, was certainly an amazing experience. We learnt how farming works in Greece, the possibilities of producing honey and other products from bee products, as well as the possibilities of closed-loop farming. This is very relevant in this day and age where we are trying to minimise global warming. There are a lot of challenges facing agriculture, which are not only important for the farmers themselves, but also for everyone. I will certainly have fond memories of the workshop, as well as of the people I met through the project. I think our cooperation will continue to grow and we will be able to develop the idea and promotion of closed-loop agriculture.
